# Paro Group Ltd

Paro Group Ltd is a small but growing company, specialising in fire, access, intruder and CCTV design, specification, installation, commissioning and maintenance. Based in the West Midlands they have recently carried out an installation as part of a substantial upgrade of office and warehousing space for a well-known bathroom manufacturer in Redditch.

To provide a lightweight but strong high level cable support system they selected the new FastConnect wire basket by Tamlex, specialist steel cable management manufacturers from Telford.

The unique patented FastConnect coupling system is simplicity itself compared to other established products available. Just a simple push down to clip together the lengths of basket tray is all that is needed. No tools are required. In fact Anthony Lawrence, Paro Group Senior Engineer said, “if our apprentice can install it with no experience it must be a good system! It goes

together really easily and has sped up the installation.” “Time and efficiency is very important to us on any installation” added Kerstin Collier from the group’s headquarters, “and given that the requirement was to fit over 50 wireless access points and more than 70 cameras, as well as cabling for several hundred data points, this process was made so much faster by the use of the tray to save time on installing the containment we needed.”

FastConnect lengths are supplied with a coupler at one end to save time resourcing separate items and all wire ends have been de-burred to prevent any snagging or damage as cables are laid in. FastConnect complies with EN 61537 for electrical continuity and C6 corrosion resistance. This year sees Tamlex celebrating 50 years of continuous UK manufacturing.
